Overview: 22 points in total.
20 points are for the project. Out of the 20, 10 for the demo, 10 for the report.
2 points are for your performance in the peer evaluation session.

(1) The demo session will be held on Nov. 29\textsuperscript{th} (Tuesday) in class. Each team will have at most 15 min to present your project. You are suggested to include the following in your presentation:

1. introduction (e.g., objectives)
2. techniques (e.g., list of major techniques, challenges, successes…)
3. demonstration (e.g., show it works)
4. conclusion

The presentation weights 10 points. It will be ranked by peer students, the TA, and the instructor. A weighted average ranking will be calculated, based on which, 0 ~ 10 points will be assigned for each team by the instructor. There will be at least 0.5 point difference between any two positions in the ranking.

(2) Your ranking as peer evaluation for all the teams will be compared with the weighted average ranking, and the correlation coefficient between the two, ranging -1 ~ 1, will be calculated. The correlation coefficient will be added by 1, to make your performance score in the peer evaluation range from 0 ~ 2. Note these (possible) 2 points are bonus for your participation in the peer evaluation session.

(3) The report weights 10 points. It will be marked by the TA or the instructor. Besides some common merits for a good report such as clarity, balanced richness and conciseness etc., the technical contents of your project will be considered again. This is due to the fact that you may not be able to fully demonstrate all aspects of your project during the demo session for whatever reason.
